APPLICATION NUMBER : 09033112

APPLICANT : VICTOR CO OF JAPAN LTD;

INVENTOR : YUMOTO SATOSHI;

INT.CL. : G06F 17/60

TITLE : OFF-LINE IDENTIFICATION SYSTEM

ABSTRACT : PROBLEM TO BE SOLVED: To safely and surely execute the transfer of merchandise in a convenience store to a customer by using the coincidence of the customer identification information of an ID card with the customer identification information of a delivery form and the detection of first and second medium identification information as the requirement of the generation of a identification code.

SOLUTION: A bar code reader 12, monitor 15 and storage device 14 are connected with a computer 13 set in a convenience store 9. In this case, an ID card 10 in which the identification information of a customer and first medium identification information indicating that the identification information of the customer is recorded are recorded, and a delivery form 11 in which the identification information of the customer and second medium identification information indicating that the identification information of the customer is recorded are recorded are used. The computer 13 generates a identification code under the condition of the coincidence of the identification information of the customer of the read ID card 10 with the identification information of the customer of the delivery form 11, and the detection of the first medium identification information and the second medium identification information.
